The Benefits of SaaS

The Cloud

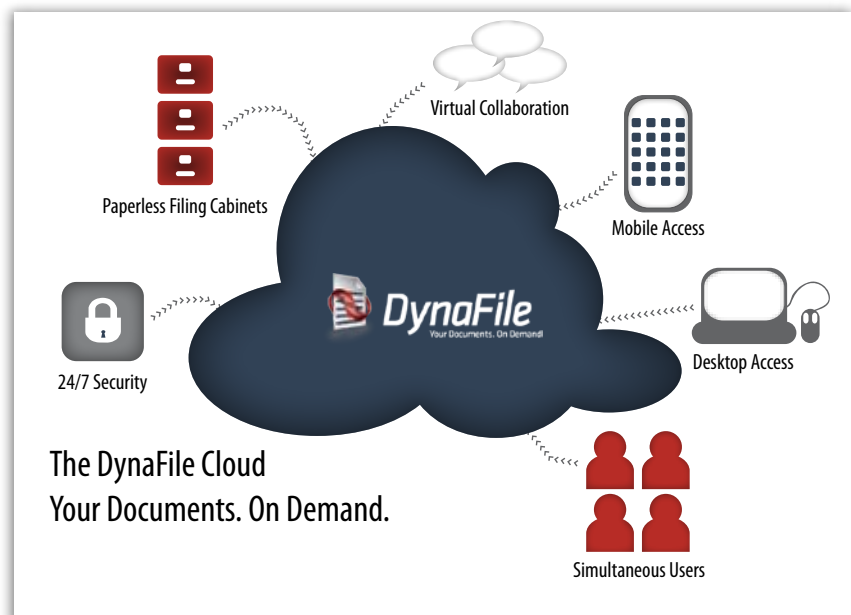

DynaFile™ is a cloud-based software as a service (SaaS) solution that uses the internet, technology and robust networking to facilitate the transfer information in real time and on-demand. It gives businesses the flexibility and infrastructure to go from paper filing cabinets to electronic file system without having to build the framework from scratch. Cloud-based document management enable companies to store and retrieve files on the web

without having to install any software programs. Whereas in the past IT department spent most of their time developing and managing a network data center and infrastructure to store and process electronic files, today the DynFile provides the same or more functionalities in a simpler and less expensive package that doesn't require the rigorous space, labor and cost of an in-house operation.

SaaS

The cloud enables DynaFile to run from an internet web browser and is referred to as a "Software as a Service" or SaaS solution. These web-based solutions provide businesses the same benefits of desktop software applications without the added expense, maintenance and management of keeping in-house applications running and up to date.

Since DynaFile is running off the web, it provides businesses with a more flexible, accessible and scalable solution to managing documents on a daily basis.

Benefits

Remote Access

SaaS solutions like DynaFile store documents in one virtual location that can be accessible from virtually anywhere using a web browser and internet connection.

24/7 Security and Recovery

Stored information is monitored 24/7 by network administrators and collocated for disaster recovery.

Storage capacity

Unlimited amounts of files can be stored in data centers that can accommodate silos of servers.

Reduced cost

DynaFile is a pay-as-you-go subscription with a low initial investment to get started.

Scalable for exponential growth

Subscription-based SaaS like DynaFile provide scalability and flexibility to fit any size business.

Synchronized Updates

Because technology is obsolete, SaaS lets DynaFile make uniform and synchronized updates to software platforms that don't interfere with daily business operation.
